About KAPS eoffice Suite

KAPS has developed a range of multimedia tools and applications geared at enhancing productivity within the workplace. Many of the products are substantially developed and supported by an experienced in house team of software experts. The products are proven and are already helping customers around the East African region to achieve their business objectives. The products are hosted to allow immediate and effective rollout for our clients bypassing the difficulties of skills acquisition, hardware and software implementation and doing away with the financial drain of capital costs and ongoing maintenance and support. The KAPS eoffice suite includes;

Core Online Business Applications

KAPS has a specialized portfolio of proven hosted applications. This suite of eOffice online applications are the tools that your business needs to manage core office functions more smoothly and efficiently. These effective digital solutions make it easy for you to run your business without having to own your own expensive software, local servers, communications equipment and IT resource personnel.

Kaps Managed Remote Data Network

The KAPS managed remote network leverages the country wide public data networks, adding a robust KAPS shell incorporating internet managed servers and a powerful software platform. The network is designed especially for real time business support. With this platform KAPS is able to provide clients with an affordable, no fuss plug and go remote data management solution.

And even where the requirements are more specialised our dedicated support team of programmers and Engineers is able to work with you to have your customized solution quickly up and running.

Benefits

- Receive remote corporate transaction data as it happens without the high cost of building and maintaining your own network
- Have your transaction data mirrored at a secure off site location
- Monitor and control your remote equipment including Point of Sale terminals
- Let your remote equipments communicate with each other for better control of your processes.

KAPSmail offers a built-in webmail facility with collaboration utilities that makes it simple to keep in touch and work with colleagues while on the move. You will have your online calendar to keep track of meetings and other important actions with automatic reminders. And file storage takes away the hassle of doing physical back-ups by automatically storing all your valuable documents online, where you can access them easily when you need to. As part of the collaboration suite KAPS will set up your personal domain, your own piece of real estate on the web. KAPS will manage all the set up and annual renewal issues for you.

SMSiT SMS Integration

SMSiT is an sms engine that will allow KAPS to quickly integrate automated sms response, sms data capture for mobility to your applications
